Logo Construction & clear space

Travel Mark logo requires separation from the other elements around it. The space required on all sides is roughly equivalent to the cap height of the logo type. It never should be less than that. The logo must always fit into the clear space area and can not be intervened by other graphical elements which could hinder legibility of the brand.

Please note that text or pictorial figures which have strong impact or impression should not be placed near the logos even though you keep the isolation area blank.

Logo mood & usage

Travel Mark logo combines three elements: Travel Mark logotype, the tagline as a graphical element and the logo icon. These elements should never be changed. Position, size, and color, along with the spatial and proportional relationships of the Travel Mark logo elements, are predetermined and should not be altered.

However, in certain position only logotype and icon could be used like small areas that will not show the tagline in proper size, but in general purposes when the brand logo used in its complete version consistently, they will reinforce public awareness of the company.

Brand Main Patterns

The brand's core pattern has been developed in two distinct variations, each reflecting the brand's identity and visual approach. Both patterns serve as integral expressions of the brand impression and graphic style. They may be applied independently or in combination, using the designated color schemes to ensure consistency and adaptability across different applications.
